### PresentersWall

*Yes/No question:* Useful in combination with a (controversial) statement.

*Multiple choice:* A multiple-choice question for polling, since there is no way to indicate which is the correct answer. For that, you should select a quiz question.

*Quiz question:* A multiple-choice question with a single correct answer.

*1 to 10:* The student selects a rating on a scale of one to ten. Example: how would you rate this meeting?

*Free text field:* An open question. Configurable as a tag cloud (if the answers are short) or as 'cards'.

*Likert (Totally disagree / Totally agree):* Indicate your level of agreement with a given statement on a 5-point scale.

*Order question:* This is a drag-and-drop question. It's a good way to clarify and visualise student preferences.

*Multiple choice with multiple answers:* Some-of-many. These questions allow for the selection of multiple answer options. Please note that there is no way to define which answer options are 'correct'.

### Shakespeak

Choice of *Vote slide* or *Message slide*.

A Message slide (open question) shows a maximum of 8 answers at once.

A Vote slide (multiple-choice question) allows for one answer or multiple answers to be marked as correct.

### Mentimeter

*Multiple choice:* The audience selects one or more answers.

*Word cloud:* A cloud of answers in which the popular answers are presented in a bigger font.

*Quiz:* Assigns candidates scores based on their answers and response times.

*Scales:* Have the audience rate statements on a scale.

*Open ended:* Open question.

*100 Points:* Each candidate has 100 points to distribute across multiple items.

*2 by 2 matrix:* Have the audience place items along two axes.

*Who will win?:* A multiple-choice question that only shows the winner, not the scores.
